

OPC Servers for MOD Products

- Available for Extended Modbus (which includes Standard Modbus RTU Support) or ICN (Instrument Communications Network)
- OPC Specification 2.0 Compliant
- Supports Communication to Any OPC Client
- Operation under Windows 95, 98, NT, 2000 and XP Platforms with Industry-Standard OPC Clients
- Easy to use Explorer-Style Configuration and Diagnostic Interface
- Simulation and Monitor Mode for Testing Communications with Client and Hardware
- Eliminates Need for Custom or Proprietary Drivers
- Supports Both DDE and Fast-DDE Communications for Non-OPC Clients, such as Microsoft Excel

***OPC Servers Provide Modbus or
ICN Communications to Any
OPC Client Software***

OPC Servers

These servers provide a communication interface between standard OPC clients and the control hardware. With a true OPC client the tags are then read directly without having to re-enter them in the HMI database. The servers have been tested for operation under Windows 95, 98, NT and 2000. They are included as an integral part of the Visual Application Designer configuration software (ViZapp). They can also be ordered separately as a stand-alone package for use with additional nodes on a network, with other standard Modbus devices such as ABB Commander series recorders and controllers, or MOD30 instruments. Both servers directly support MOD30ML and Modcell Multiloop IEEE floating point, improving resolution and eliminating the need for scaling in the host. The servers also have the ability to import interface files created by the MOD30ML and Modcell MultiLoop instrument configuration software, automatically and effortlessly creating the server's tag database.

Extended Modbus OPC Server

The Extended Modbus OPC Server provides an enhanced communication interface for MOD30ML controllers, Modcell MultiLoop Processors. It also supports Standard Modbus RTU devices, such as the ABB Commander Series of controllers and recorders.

ICN OPC Server

The ICN OPC Server provides a communication interface for MOD30ML controllers, Modcell MultiLoop Processors, and MOD30 series instruments through an Instrument Communication Network Link.

Extended Support Services (ESS)

Each OPC Server includes 30 days of technical support from date of the first support request call, and update protection for 30 days from date of the order.

The Extended Support Service option provides additional priority technical support and automatic issue of new OPC Server software releases for a period of twelve months from the date of the order.

MINIMUM SYSTEM REQUIREMENTS

Windows 95/98 (Minimum OS)

- IBM Compatible Personal Computer
- Win95 with Service Pack 1 or Win98
- 133MHz Pentium
- 64MB RAM
- 10MB free hard disk space
- CD-ROM Drive

Windows NT/2000/XP (Preferred OS's)

- IBM Compatible Personal Computer
- NT 4.0 with Service Pack 6, or Windows 2000
- 266MHz Pentium
- 64MB RAM
- 10MB free hard disk space
- CD-ROM Drive

ORDERING INFORMATION

NOTES:

1. The following End-User information must be supplied for each package:
 - Company Name
 - Complete Address
 - Contact Name
 - Telephone Number
 - Fax Number
2. When ordering an Update or ESS, serial number from original server must be supplied on order.
3. If adding OPC Server to an existing MicroMod software installation (e.g. ViZapp, Micro-PWC etc.) provide serial number of existing copy protection key and order option 000 (None) under Copy Protection Key.
